Description continued: in gable end; other pumphouse is similarly detailed but has a corrugated-metal roof; reservoir is lined w/ concrete; post-1935 machine shop (noncontributing) at NW corner of property; modern water tower (noncontributing) also stands on property.

Significance continued: pumphouse was built on the south side of the lot. Few alterations and additions affect the historic integrity of this complex which has noteworthy examples of Romanesque Revival-influenced architecture. The plant's continued operation since the early 20th century is a tribute to the engineering of the water work's original designers and builders. NPS Form 10-900-a (3-82)
